Ibsa Abera Sori

Software Engineer | Full-Stack Web Developer

Addis Ababa, Ethiopia | ibsaabera712@gmail.com | +251-994-25-26-25 | Github | Portfolio

EDUCATION

B.Sc. in Software Engineering, Addis Ababa Science and Technology University *Expected 2028*
Addis Ababa, Ethiopia

- Relevant Coursework: Data Structures & Algorithms, Internet Programming, Database Systems, Object-Oriented Programming, Operating Systems.

GDG Frontend Development with HTML, CSS & JS, Google Developers Group (GDG), AASTU *Addis Ababa, Ethiopia*

GDG Backend Development with NodeJs, Express & MongoDB, Google Developers Group (GDG), AASTU *Addis Ababa, Ethiopia*

PROFESSIONAL SUMMARY

Full-stack developer building production software with Node.js/Express, React, and PostgreSQL, currently shipping features across two live roles, a full-stack internship at Everline Technologies and a backend engineering role for AASTU Gibigubae. Comfortable moving between frontend, backend, and infrastructure, with hands-on Docker and Linux experience. Looking to bring that same speed and ownership to a team building real products, not just prototypes.

PROFESSIONAL EXPERIENCE

Full-Stack Developer Intern, Everline Technologies (Current) *Next.js, TypeScript, Express, PostgreSQL*

- Built and shipped full-stack features end to end using Next.js, TypeScript, Express, and PostgreSQL across a live production SaaS codebase.
- Implemented REST API endpoints and PostgreSQL-backed data models, debugging and refactoring existing code through Git-based pull request review while collaborating with the engineering team to ship features on a real product used by real users.

Backend Developer, AASTU Gibigubae (Current) *TypeScript, Express, PostgreSQL*

- Designed and built backend services using TypeScript, Express, and PostgreSQL to support core platform features, with a focus on clean, maintainable architecture.
- Implemented REST API endpoints and database schemas, working independently to debug, test, and refine backend functionality ahead of release milestones.

PROJECT EXPERIENCE

Dynamic QR-Based Attendance Management System (Full-Stack)

- Replaced manual check-in with a faster digital flow using dynamic QR code generation.
- Implemented user authentication, session management, and role-based access control.
- Delivered backend APIs and database integration for real-time attendance recording and reporting.

FuelPass (Full-Stack, Hackathon)

- Built a MERN-stack application (MongoDB, Express, React, Node.js) digitizing Ethiopia's fuel rationing system.
- Implemented AI-based fuel allocation logic using Google Gemini.
- Delivered QR-code voucher generation and redemption with real-time updates powered by Socket.io.
- Placed 4th out of 20+ teams at the hackathon; live at fuelpass-delta.vercel.app.

ShopSync (Full-Stack)

- Built an automated pipeline syncing products from a Telegram channel via the Telegram Bot API to a live web storefront, with images stored on Cloudinary.
- Implemented fuzzy duplicate-product detection to maintain catalog accuracy.
- Developed 7 custom React hooks powering cart, auth, categories, products, and sync-log functionality.
- Delivered a production-quality Node.js/Express/MongoDB backend; live at shop-sync-sand.vercel.app.

SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, Java, C++
Frontend: React.js, Next.js, Vite, TailwindCSS, Chakra UI
Backend & Tools: Node.js, Express, PostgreSQL, Supabase, MongoDB, Docker, Linux, REST API design, authentication, middleware, Git, GitHub, Postman, VS Code, Vercel, Render, Database Integration
Version Control: Git/GitHub workflow, branching, pull requests, code review
